New Technology – Inmarsat BGAN

Max Enders 2015-04-27 Albuquerque, New Mexico

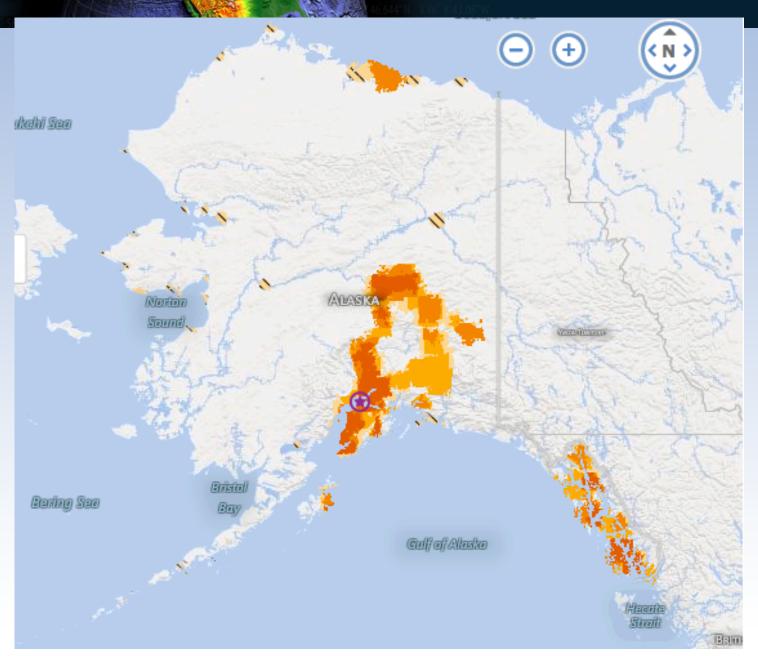

Why Use BGAN?

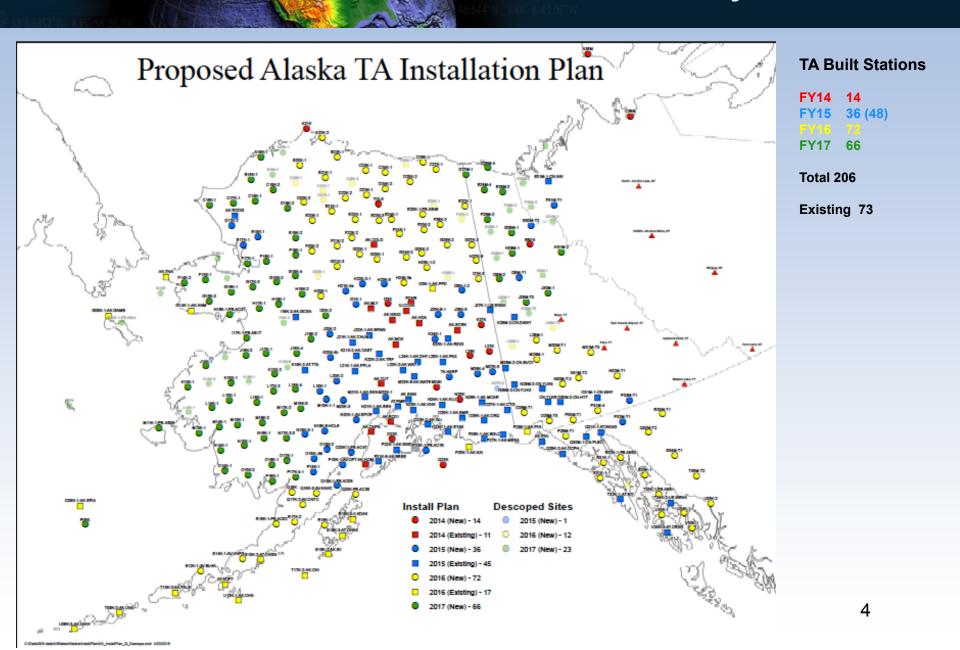

Why use BGAN?

What is **BGAN**

BGAN = Broadband Global Area Network

High speed IP data --- Data rates up to 492 kbps

2 satellites visible from Alaska - Inmarsat 4 - F1 ("Asia-Pacific"), Inmarsat 4 - F3 ("Americas")

L-band 1.5 to 1.6 GHz, so less rain fade than most VSATs

(GPS L1 is at 1.57542 GHz)

Satellite I4 Americas

BGAN Coverage Map

Satellite I4 EMEA

14 Asia-Pacific

Easy to set up, does not require very fine pointing (clear skyview important)

Antenna has small cross-sectional area (<.5m), less vulnerable in high wind than

A number of terminals are available, ATA is using Hughes 9502

Draws about 18W-20W while transmitting, similar to a VSAT (only while in "burst mode")

10mW to 18W in normal operation (Wake on LAN)

Avg. ≈2.5W-3.0W

Multiple ISPs provide data/voice plans for BGAN service

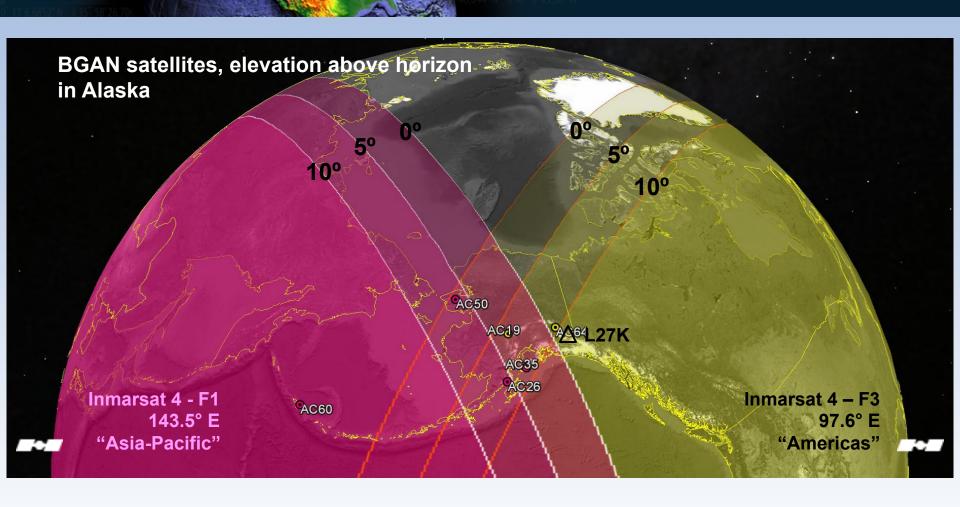

Typical data rates start at \$5.00 - \$6.45 per MB (negotiate)

Static IP and VPN options are available (ATA using VPN)

BGAN Coverage

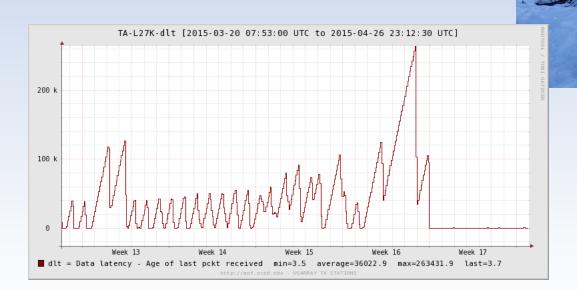

L27K Beaver Creek

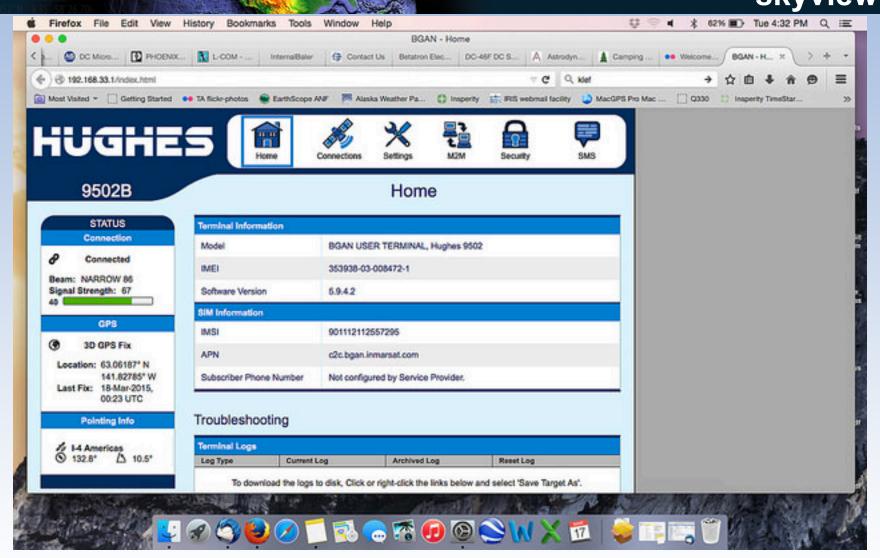

L27K Beaver Creek

- Hughes 9502 installed 3/19/2015.
- Immediately had problems.
 - Only connected for 12hrs.
 - Extreme high latencies.
 - Unable to complete data downloads.
- Hardware or config was initially suspect.

L27K Beaver Creek – How important is skyview?

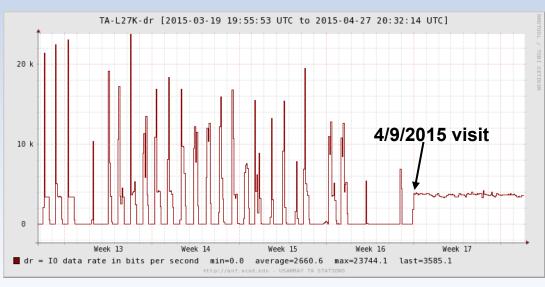

L27K Beaver Creek – How important is skyview?

L27K Beaver Creek

- Site visit made on 4/9/2015.
 - Discovered no hardware/config issue.
 - Foliage was obstructing skyview.
 - Removed foliage and re-aimed antenna.
- Immediate improvement in latency and uptime.
- No data gaps since maintenance visit.

BGAN Deployments 2015
