

Figure 2.9: Observed and predicted Caribbean site velocities. Black circles and vectors with 2σ error ellipse are velocities of sites in a NA reference frame. Open circles with red vectors (offset for clarity) are velocities predicted by the computed 9-site GPS-only CA-NA Euler vector. ROJO (shown here in green), previously considered as a stable CA site, was not used in the inversions. Abbreviations are the same as those found in Figure 1.1.
