SEISMIC NETWORK - 1993

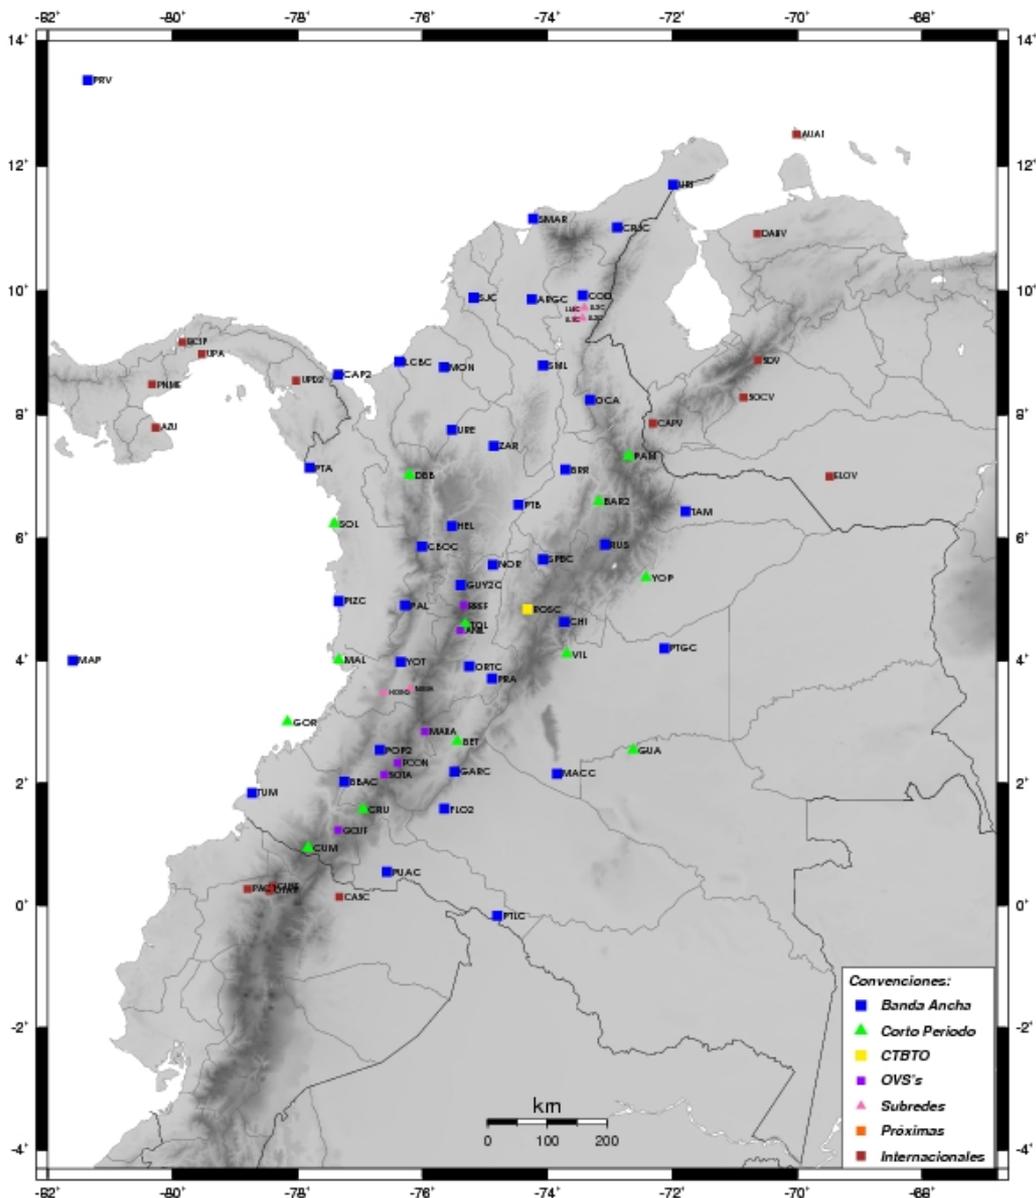

The seismic network of the Colombian Geological Survey – SGC created in 1993 as part of the National System for Disaster Risk Management, has the main purpose to provide quick and accurate information on the seismicity occurred in the Colombian territory, as to study the seismic activity of the country and its associated hazard focusing on prevention, in order to mitigate the damage to people and their property.

SEISMIC NETWORK - 2015

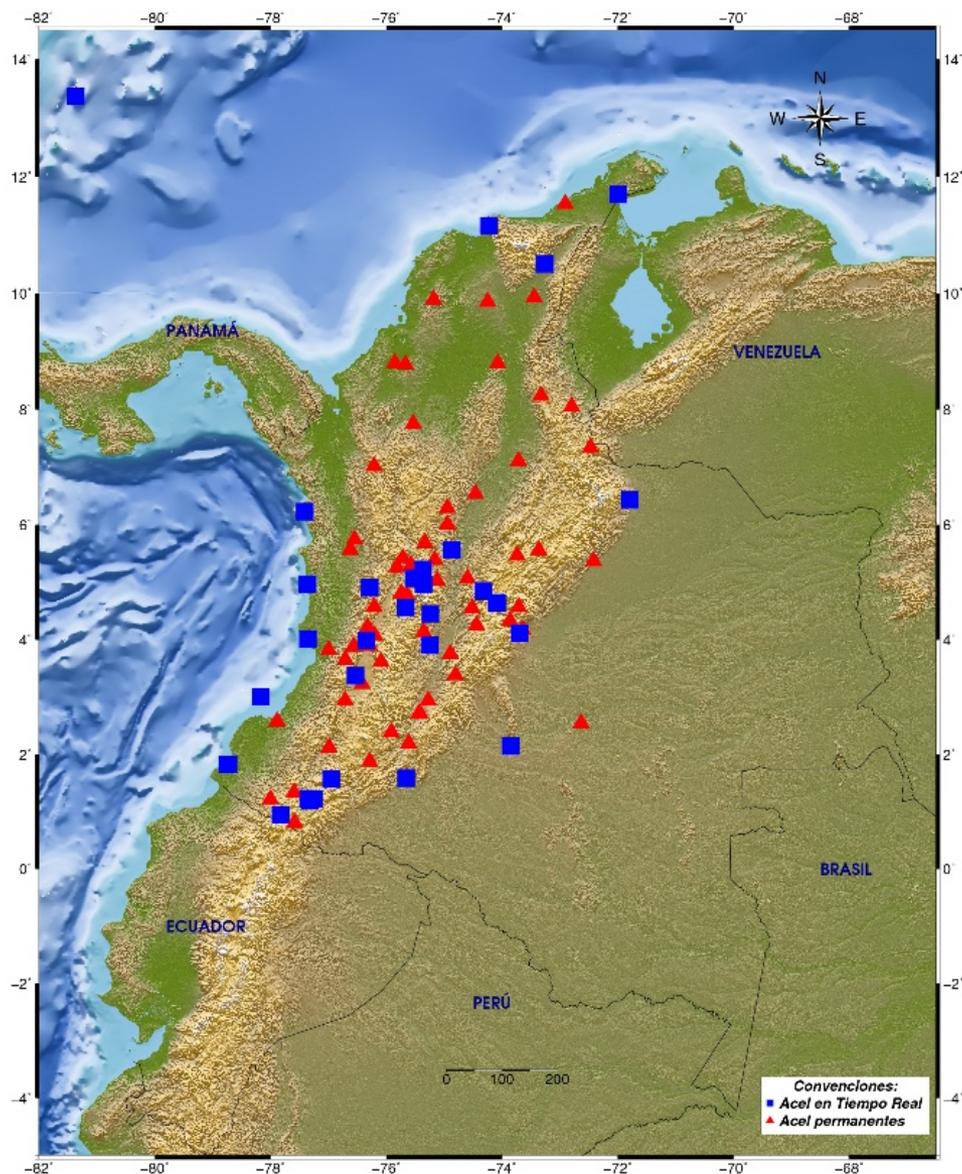

54 real time seismic stations
40 BB and 14 SP

We also share data with international networks, as Panama, Ecuador, Venezuela and Puerto Rico.

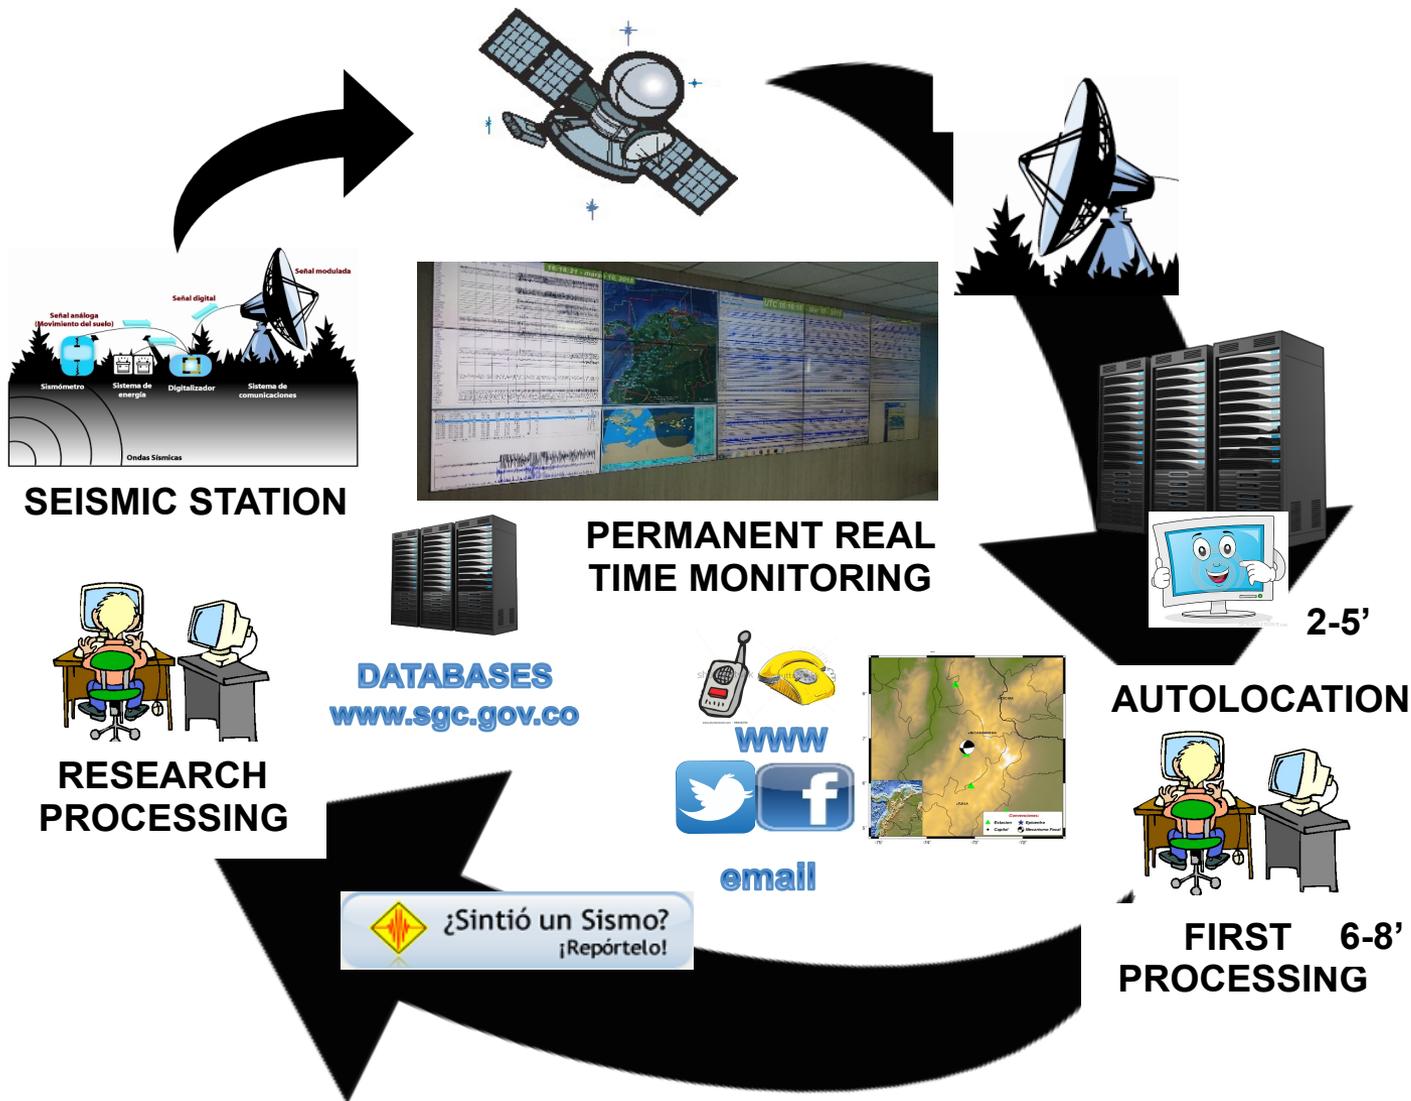

STRONG MOTION NETWORK - 2015

108 strong motion permanent stations.

33 in real time connection

INTERNATIONAL AGREEMENTS

The SGC is committed with the field. In recent years, we have signed agreements with international organizations to improve our knowledge about the **Seismic and Tsunami Hazard**, getting involved in researches as the GEM-SARA, 2014 – 2015 Project (Global Earthquake Model - South America Seismic Risk Assessment) and SATREPS, 2015 – 2020 Project (Science and Technology Research Partnership for Sustainable Development), the last one including a specific topic in **Tsunami monitoring, evaluation and research for risk reduction**.

VOLCANO MONITORING NETWORK - 2015

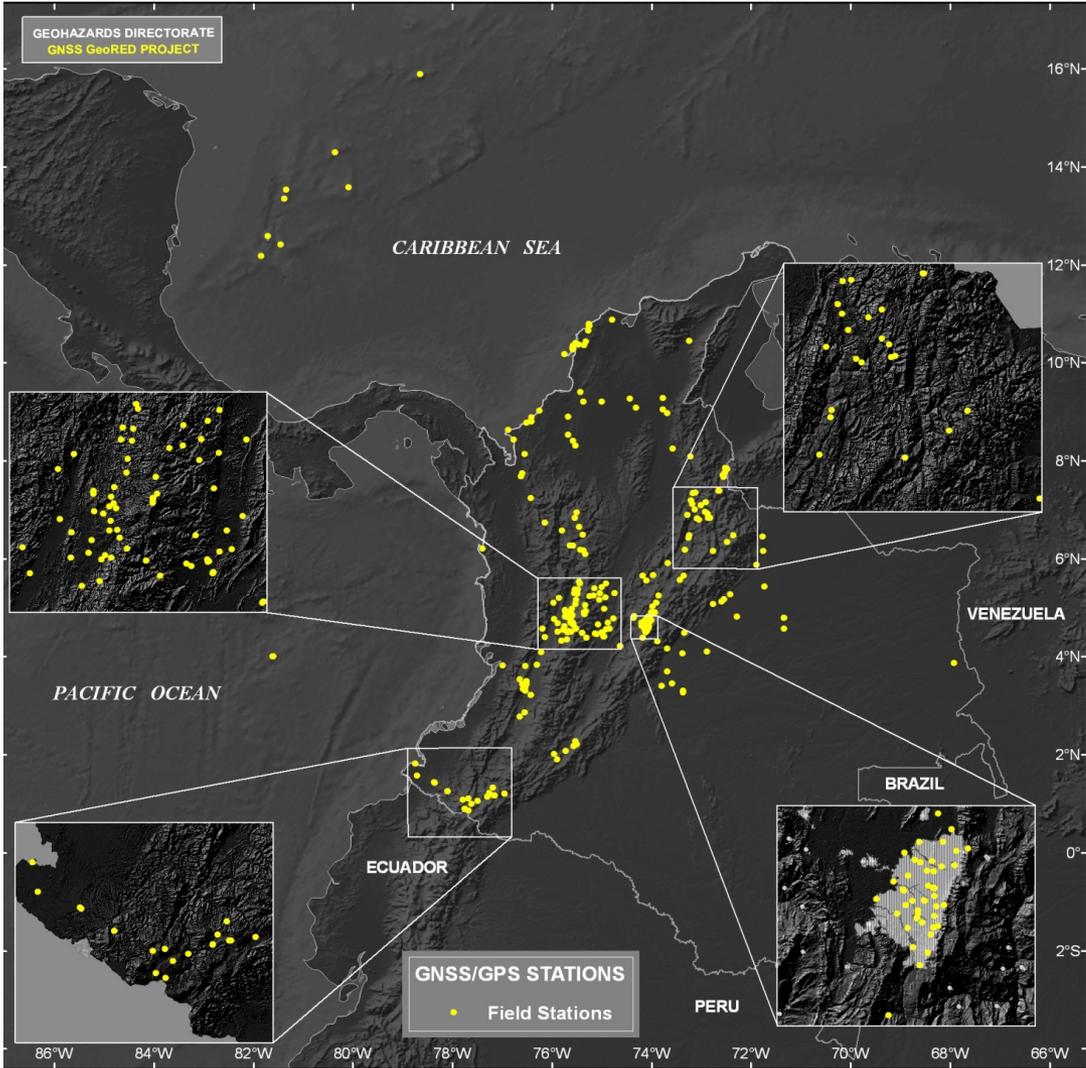

GPS/GNSS PERMANENT STATIONS NETWORK

Currently, the GeoRED Network is managing 68 continuously stations including:

- 59 GeoRED GPS/GNSS continuously operating stations;
- 4 GNSS continuously operating stations provided by the COCONet Project;
- the Bogotá IGS GPS station (BOGT), installed in 1994 under the agreement between JPL-NASA and the CGS;
- the San Andres Island station, installed in 2007 under the MOU between UCAR and the CGS,
- 3 stations installed in partnership con local institutions (Sugar Cane Research Institute, National University and Aburra Valley Metropolitan Office.
