# 2014 Piñon Flat Tests

~0.75 km

# Downhole Tests

**Epoch A (April 10 – July 6):** 9 TA posthole broadband, many grouting/hole packing types

**Epoch B (July 7 – November 13):** 4 UCSD sensors added, packing changed

**Epoch C (November 14 – Present):** Some sensors swapped, all now packed with sand

## Grout Methods

- 1) plunger from base
- 2) fill around annulus from surface
- 3) pump at 30-100 PSI through base

# Examples – Epoch C

Installation: PVC case, sand fill, grouted annulus

Installation: Steel case, sand fill, loose grouting at bottom of case

# Epoch C

## Epoch C PDF Residual Medians BH[E/N]

## Epoch C PDF Residual Medians BH[E/N]

# Median Noise Levels

**~100 seconds**

Good correlation w/grouting type at long periods.

# Median Noise Levels

~0.75 km

~11 Hz

~100 seconds

Good correlation w/grouting type at long periods.
